# CAN WE USE LOW-COST 360 DEGREE CAMERAS TO CREATE ACCURATE 3D MODELS?

Luigi Barazzetti,  
[luigi.barazzetti@polimi.it](mailto:luigi.barazzetti@polimi.it)

**Consumer-grade cameras able to capture 360 photos and videos are becoming more popular for the opportunity to look in any direction, exploiting immersive visualization with virtual reality headsets**

<b>360 camera</b>	<b>Average Price in February 2018 (euro)</b>
Samsung Gear 360	90
Garmin VIRB 360	800
Insta 360 Air Voor	140
Nikon KeyMission 360	350
Xiaomi Mijia Mi Sphere 360	220
LG 360	150
360FLY	750

### The Best 360 Cameras of 2018

*Tiny video cameras with multiple ultra-wide lenses capture the entire world around you—all 360 degrees of it. Here's how the most popular models stack up in our testing.*

### The Best 360-Degree Camera

UPDATED MAY 29, 2018:

We've tested the **Rylo** and **GoPro Fusion** cameras and discuss them in the Competition section.

## ❑ Photogrammetric surveys → pinhole images (normally)

- complex scenes → several tens of images
- no commercial solution for AAT without targets

## ❑ Main idea → few (spherical) panoramas instead of tens of images

- large field of view ( $360^\circ$ )
- high resolution images ( $>100$  megapixels)
- automatic creation with stitching software

camera is centered: correct

too far back: misalignment

too far forward: misalignment

## □ Abbey of San Galgano

# ❑ Bundle block adjustment in spherical coordinates

$$x = R \cdot \left( -\theta_0 + \operatorname{atg} \frac{(X - X_0) - \alpha_y(Y - Y_0)}{(Y - Y_0) + \alpha_x \cdot (Z - Z_0)} \right)$$

$$y = R \cdot a \cos \frac{\alpha_y(X - X_0) - \alpha_x(Y - Y_0) + (Z - Z_0)}{\sqrt{(X - X_0)^2 + (Y - Y_0)^2 + (Z - Z_0)^2}}$$

$$\begin{bmatrix} X' & Y' & Z' \end{bmatrix} M^T \begin{bmatrix} 0 & -bz & by \\ bz & 0 & -bx \\ -by & bx & 0 \end{bmatrix} M'' \begin{bmatrix} X'' \\ Y'' \\ Z'' \end{bmatrix} = 0$$

- $x, y$  ... image coordinates
- $X, Y, Z$  ... object 3D coordinates
- $R$  ... radius
- $\alpha_x, \alpha_y$  ... correction angles (roll and pitch)
- $q_0$  ... heading
- $X_0, Y_0, Z_0$  ... centre of the sphere

## 3D Arch 2017, Barazzetti et al., 3D modeling with the Samsung Gear 360

The aim of this work was to test the metric accuracy and the level of detail achievable with the Samsung Gear 360 **(350 \$)**

Integrated f/2.0 fisheye lenses

Dual 15MP CMOS sensor

Equirectangular image: 7776×3888 pix

Control points (4)		Check points (4)	
RMS XY (m)	RMS Z (m)	RMS XY (m)	RMS Z (m)
(a) projections from the mobile phone			
0.061	0.011	0.088	0.009
(b) projections from Action Direction			
0.053	0.017	0.092	0.009
(c) projections from PTGui			
0.019	0.002	0.029	0.008
(d) projections from Autopano Giga			
0.011	0.001	0.037	0.009

Calibration and correction before stitching

**Relative metric accuracy was about 1:300**

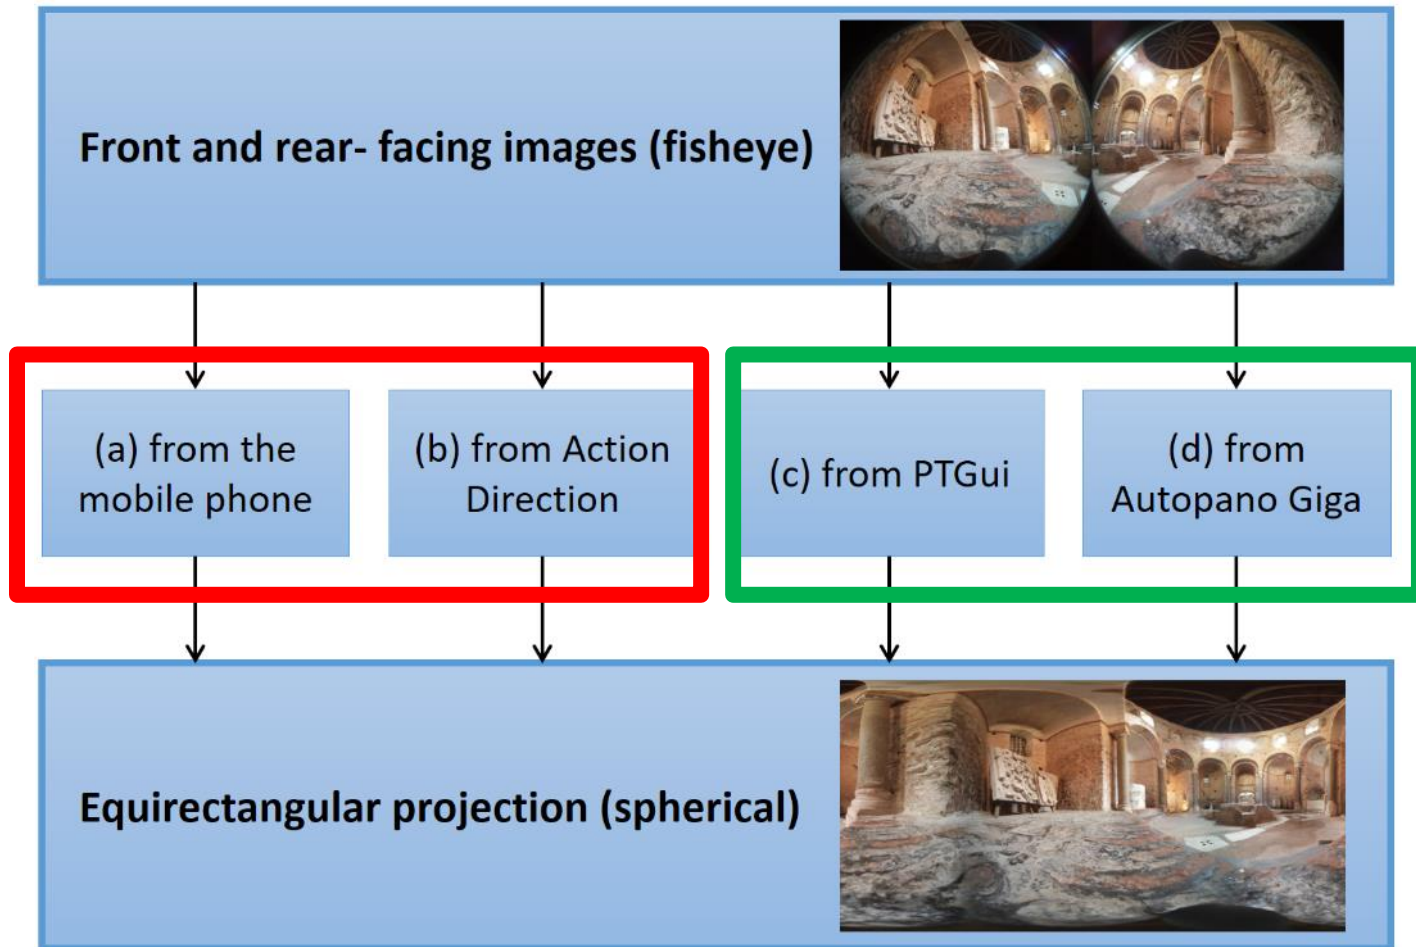

## 3D Arch 2017, Barazzetti et al., 3D modeling with the Samsung Gear 360

2 fisheye images

Equirectangular  
projection

## Xiaomi Mijia Mi Sphere 360 (300\$)

2 Integrated fisheye lenses

2 x 1/2.3 inch sensors

Equirectangular image: 6912 x 3456 pix

Direct use of the equirectangular  
Projections stitched with Madventure 360

**Relative metric accuracy is about 1:2000**

Ok

## Additional consideration n. 1

Points matched in several images

100% overlap!

Photoscan

Pix4Dmapper

## Additional consideration n. 2

Graphic visualization of error ellipses for camera locations  
Similar to geodetic networks

Pix4Dmapper

Problems in experiments with rolled images  
Rotation of  $90^\circ$  (roll)  $\rightarrow$  failure of bundle adjustment

## Dense point cloud generation

15 spherical images acquired inside a historic cellar

PhotoScan

Comparison with laser scans  
(Faro Focus 3D)

$\pm 5$  mm discrepancy

## Orthophoto production

Wall with good texture (bricks)

### Nikon D610 + 20 mm

Average camera object - distance 1.7 m

GSD: 0.5 mm

(Normal + Convergent images)

### Xiaomi Mijia Mi Sphere 360

Average camera object - distance 1.5 m

GSD: 1.3 mm

(Convergent images??)

**Overall, 3 time worse**

## Comparison of point clouds generated in the two projects

Overall discrepancy:  $\pm 2.5$  mm

## Orthophoto production

**Nikon D610**

Pixel size: 0.5 mm

**Xiaomi Mijia  
Mi Sphere 360**

Pixel size: 2 mm

## Linking in/out: illumination conditions!

## Illumination conditions!

Valid solution for the survey of long and narrow spaces

Metric accuracy with the Xiaomi Mijia Mi Sphere 360: 0.5 – 1.5 pixels

24 megapixels on a 360 field of view is not a very high resolution

GSD of a spherical project is 3-6 times worse than the same project with central perspective lenses

Image acquisition very simple: camera pointed at any direction

Illumination conditions: big problem for 360 images
